Allegro Solar Repeater Installation Guide

INSTALLATION

To install the Allegro Solar Repeater, will need standard stainless-steel mounting straps. These straps will need to be threaded through the eyelets on the back of the solar repeater and around the pole that will be used for installation. Typically, it is a standard wood telephone-style pole. Note, the solar panel will need to be aimed to the Southwest to ensure maximum exposure.

Once the straps are put through the back of the solar repeater, and the straps are wrapped around the pole and secured tightly; installation is complete.
