

For many water utilities, commercial and industrial (C&I) meters are responsible for the majority of revenues. Though few in total installed quantity, more than any other meter, they endure the harsh rigors of wide ranging high flow rates, less-than-perfect pipe configurations, and incessant use.

Strainers are recommended by the AWWA for all turbine and compound meter services 2" and above to screen debris from the line that can cause damage to the measuring element. It's also an investment that must be protected for both short performance and long term revenue assurance.

Features & Benefits:

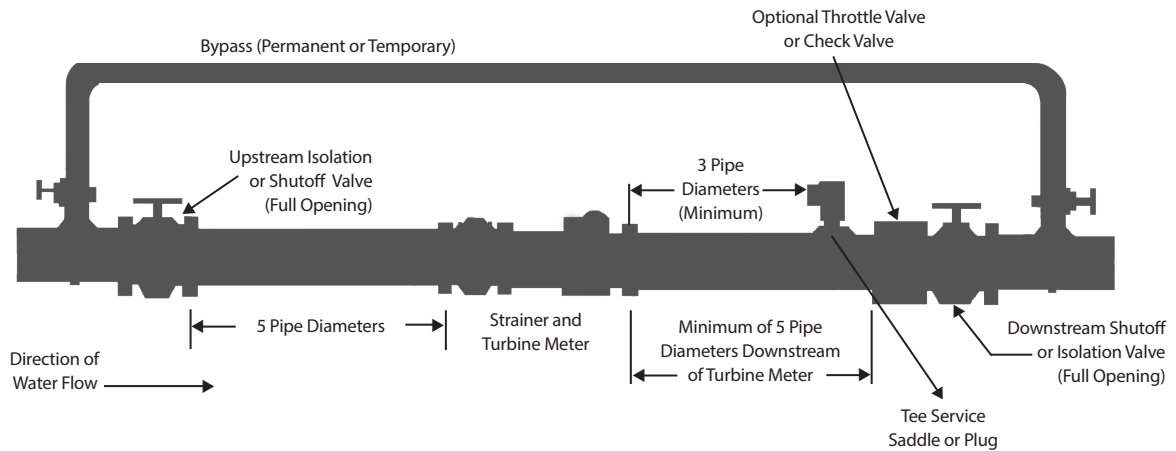

- Safeguards against loss of warranty coverage from damage due to harsh conditions
- Life Extension for your commercial and industrial meters
- Tough and rugged AWWA lead-free bronze construction for peace-of-mind performance
- Meter performance improvement with bottom-line results from laminar flow conditioning
- AMR/AMI Compatible
- Simplifies preventative maintenance activities
- Reduces long-term wear
- Improves overall meter performance
- Creates greater flexibility in tough installation environments

Strainers - Lead Free Bronze 2" - 6"

METER OPERATING CHARACTERISTIC/DIMENSION	2"	3"	4"	6"
